

WebRates -- Overview

WebRates is a simple application designed to automate the distribution of products that are not available through an API. This guide details the main features of WebRates.

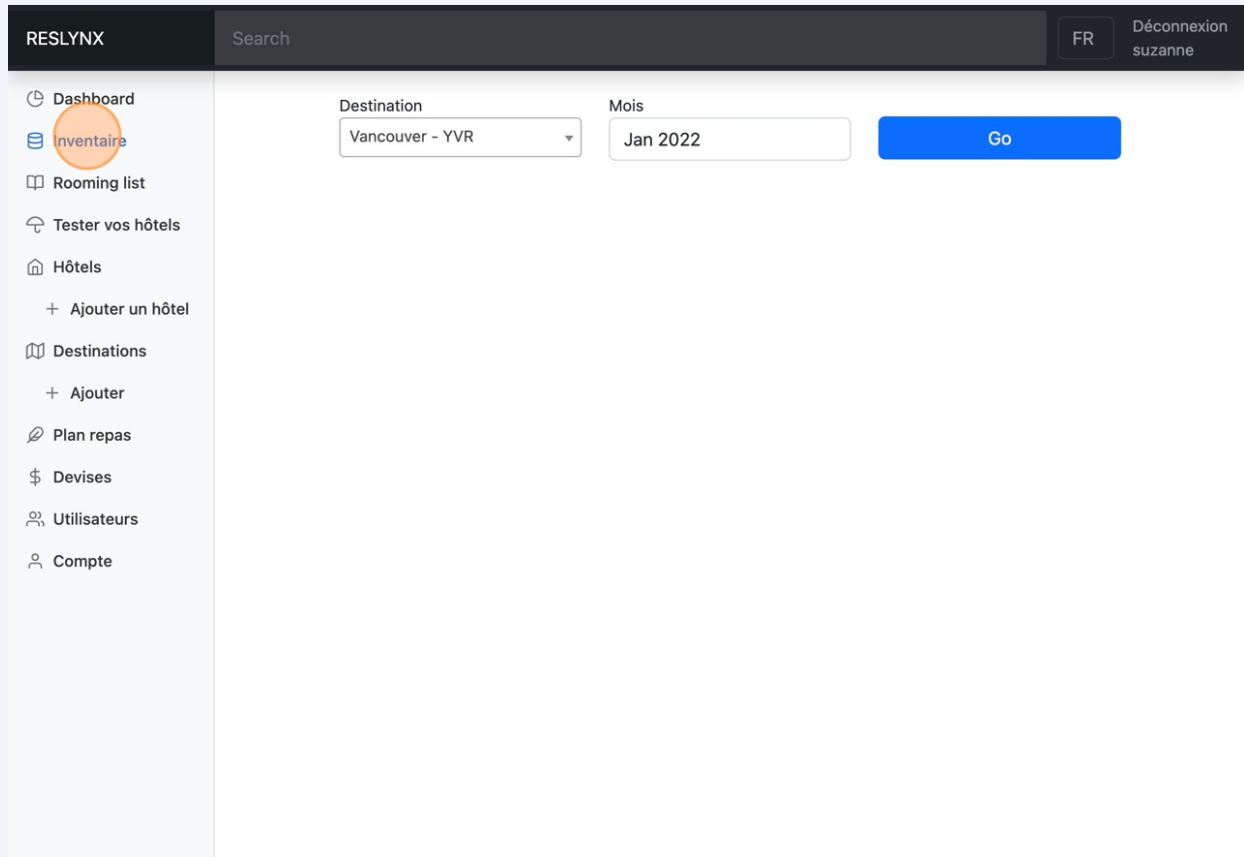

1

The **Dashboard** gives you an overview of all your reservations in WebRates. You can view them at different times, and they will all appear at the bottom of the page.

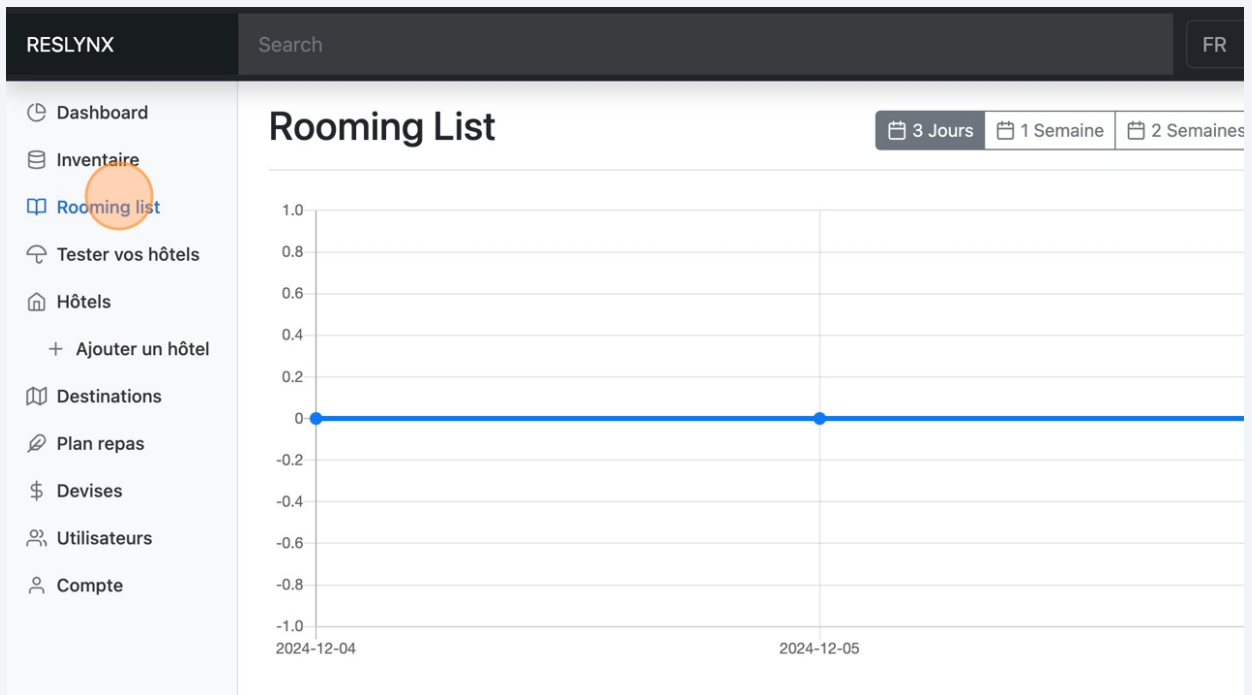

2

The **Inventory** lets you quickly see all the rooms available for a destination in a given month. For example, you can view your available rooms for January 2022 in Vancouver.

3

The **Rooming List** section allows you to see which reservations have been confirmed by the hotel and have therefore made the entire "WebRates flow".

4

The **Test your hotels** section allows you to simulate a hotel search from ResLynx UI.

You need to enter an arrival and departure date and a destination. These destinations are “fetched” from the City Completer associated with the account, as in UI.

If a specific hotel is entered, only the results for that hotel will be displayed. Otherwise, all hotels with availability for this destination/date combination will be displayed.

This makes it possible to test how a hotel is configured in WebRates without necessarily going through ResLynx UI, which is more complex.

For example, we want to make sure that the rooms in our offer for the hotel “Le Concorde”, which is located in Quebec City, come up in a search for Quebec City.

The screenshot shows the ResLynx interface for testing hotel searches. The page title is "Valider vos hôtels". The form includes the following fields and controls:

- Hôtels spécifique:** A text input field with a blue "Tester" button to its right.
- Date d'arrivée:** A date picker showing "19".
- Date de départ:** A date picker showing "19".
- Nombre de personnes:** A text input field containing the number "2".
- #1:** A text input field containing "35".
- #2:** A text input field containing "35".
- Destination:** A dropdown menu with "Choisir" selected.
- Latitude:** A text input field.
- Longitude:** A text input field.
- Rayon:** A text input field.

The left sidebar contains navigation options: Dashboard, Inventaire, Rooming list, **Tester vos hôtels** (highlighted with an orange circle), Hôtels, + Ajouter un hôtel, Destinations, Plan repas, + Ajouter, \$ Devises, Utilisateurs, and Compte. The top right corner shows "FR" and "Déconnexion suzanne".

5

The **Hotels** section contains all the hotels you wish to distribute through WebRates. This is where you can add new hotels, as well as manage and consult your existing hotels.

6083	YQB	Stoneham-et-Tewkesbury	Hotel	Hotel St-Paul TEST	
6084	YQB	Vieux-Quebec	Hotel	Hotel Sainte	

6

The **Destinations** section includes all the destinations you can associate with your hotels. It is these destinations that are compared with the destinations in the booking engine search query (ResLynx UI). You must use the IATA codes of your destinations.

The screenshot displays the ResLynx web application interface for managing destinations. The top navigation bar includes the ResLynx logo, a search field, and user information (FR, Déconnexion, suzanne). The left sidebar lists various management options, with 'Destinations' highlighted in orange. The main content area is titled 'Destinations' and features a '+ Ajouter' button. Below the title is a search input field and a checkbox for 'Afficher les désactivés'. The core of the interface is a table listing destinations with columns for Code, Nom, Courriel, Langue, and Action. Each row includes an edit icon.

Code	Nom	Courriel	Langue	Action
AYQ	Uluru	suzanneboutetotf@gmail.com	en	
CUZ	Cuzco	tbc@gmail.com	en

MRS	Marseille	patrick.beaulieu@reslynx.com	en	
ORY	Orly	louis.mercier@reslynx.com	fr	

7

The **Categories** section allows you to map a ResLynx/WebRates product category to its PC Voyage counterpart. This section is only useful in the context of sending accounting entries to PC Voyage via their Sentinelle API.

The **Hotel chains** section lets you group hotels by attributes (e.g. "pet-friendly", "seaside"). Associating hotels with hotel chains can be useful when searching by these attributes.

The **Confirmation emails** section lets you set the appearance and content of your confirmation emails. To test this, you need to enter a real booking reference number in WebRates (and not the booking number in ResLynx UI).

The screenshot shows the 'Courriel de confirmation' (Confirmation Email) settings page in the FlextoSearch interface. The page is titled 'Courriel de confirmation' and features a sidebar on the left with various navigation options. The main content area contains three input fields and a 'Tester' button. The first field is labeled 'Choisir une langue' (Choose a language). The second field is labeled 'Numéro de fichier' (File number). The third field is labeled 'M'envoyer le test à l'adresse:' (Send the test to the address:). Below these fields is a blue 'Tester' button. At the bottom of the page, there is a dark area with a small table containing two rows: the first row has the number '1' and the second row has a red 'x' icon followed by the number '2'.

The **Cancellation emails** section lets you configure the appearance and content of your cancellation emails. To test this, enter a real booking reference number in WebRates (not the booking number in ResLynx UI). ****This feature is often not used by users, who prefer to call the hotel directly when they need to make a cancellation.**

The screenshot shows the 'Courriel de confirmation' (Confirmation Email) configuration page in the FlextoSearch interface. The page is titled 'Courriel de confirmation' and features a sidebar on the left with various navigation options. The main content area contains three input fields for configuration: 'Choisir une langue' (Choose a language), 'Numéro de fichier' (File number), and 'M'envoyer le test à l'adresse:' (Send the test to the address:). Below these fields is a blue 'Tester' button. A large black redaction box covers the bottom portion of the page, with a small red 'x' icon and the number '2' visible in the top-left corner of the redacted area.
